

Mining Facilities

PARSONS

ELECTRICAL | TECHNOLOGIES | TECHNICAL SERVICES

Our years of experience working in the mining industry have taught us the importance of taking time to understand your processes, your schedule, and your critical deadlines. We believe unplanned shutdowns and unscheduled outages are simply unacceptable. So our processes are designed to drastically reduce your risk.

Training and Safety

The safety of our employees and yours is our top priority. Our electricians are MSHA-trained and prepared to work in mines. In addition to participating in the required training, we also incorporate our quality control measures, and we take into account all factors including other trades, resulting in one of the best EMRs in the industry.

Communication and Cooperation

We communicate regularly and proactively with you to ensure no surprises. We plan our work around your process and priorities. And we are adept at working effectively with other trades associated with your project.

Time and Money

We can quickly understand your entire system and where there are critical paths. Each mine has different vendors, equipment, control systems and mechanical systems. Our diverse experience provides a solid foundation

for comprehending different systems and how they work together. We are extremely value oriented; we strive to improve your schedule and save you money wherever possible. We take the time to understand your environment and goals; then we create our plan around those goals. Count on Parsons to handle nearly any type of system or process, including:

- Bucket elevators and conveyors
- Screener and separators
- Roller mills and ball mills
- Lube systems
- Dust collection
- Scales and metering
- Dryers and coolers
- Multi-drives and soft-starts

Parsons Technical Services

Our technical services team provides electrical and mechanical specialized services 24/7. You can rely on us for testing and commissioning, engineering solutions and maintenance programs.

Innovation.
Dedication.
Trust.
